Holm[®]

Introducing the future of filters

A sister company of HTS Spares, Holm embraces filters of all types, brands, shapes and sizes, including both Holm and manufacturer branded, for all construction equipment.

Holm has worked with a leading European filter manufacturer to develop the largest range of credible plant machinery filters available. With the specification of Holm filters matching or exceeding that of original manufacturer parts, the quality of Holm filters is assured.

Holm takes the complexity out of a complex market

Holm makes the sourcing and supply of filters simpler, whilst also reducing costs, whether you choose Holm-branded or OEM filters across your fleet.

For every model type, the filters required can be supplied in useful kits, containing everything you need to complete an interim or full service on your construction equipment.

On the following pages you will find a list of Filter Kits to suit the machines run by Hirebase.

Holm Quality **OE specification**

Holm Filters are manufactured in factories around the world that produce solely for OE brands such as JCB, Donaldson, John Deere, Agco, VW, etc.

A significant cost of filters is in the media. A reduced specification will reduce the pleat width and length inside the cartridge, resulting in a poor quality filter. Holm manufactures only the highest grade filters with superior quality media.

Filter Kits are the 'genius' of our service

By grouping all the filters regularly used into a single seal box, the time you would usually take to identify and locate the individual filters you need is drastically reduced.

We can create bespoke filter kits to suit your specific applications and have them readily available for delivery when you need them.

We aim to stock your fleet

By working with you and your specific fleet lists, we are able to consolidate your stock requirements into 2 categories:

1. What is stocked in your workshop
2. What is stocked at Holm

Reducing stock held on your site is proven to save huge amounts of time and product redundancy.

The Holm guarantee

Holm's reputation is built on an uncompromising commitment to ensuring the highest possible standards throughout the product range and the business as a whole. Independent auditing and certification gives our clients 100% confidence that products produced by Holm are manufactured according to exacting standards.

Only a company with such high standards can confidently offer customers a full 12 Month Parts and Labour Warranty.

In the highly unlikely event that a Holm manufactured filter fails within the first twelve months due to a manufacturing fault, Holm will not only supply a replacement part, but will cover all associated costs of restoring the vehicle back to the condition it was in before the failure.

You can be confident that Holm filters have been designed specifically for your engines and equipment and if you change the filters according to the manufacturer's recommendations, the use of Holm filters will not invalidate your manufacturer's warranty.
